## Project:

### Hotel Haven (Hotel Booking Website)

[Live\\_Link](#) | [FronEndCode](#) | [BackEndCode](#)

- It is a hotel booking site where users will have booked hotels in different places if there are our available services as hotels.
- This site has different authenticated for admin ,manager and user . One manager can be added one hotel information but will be added multiple hotel rooms of her/his respective hotel.
- Admin can manage all things as can be approved manager hotel and authorized a user role to manager role. Also, a manager will see site behavior as the preference of the user.
- Manager can be updated on their hotel information. Also, a manager can see their hotel booking information, moreover, a manager can write blogs about hotel places and hotel services.
- User can see filtering hotels for search of their places if they have our hotels. Users can review our hotel. Also, users read our blog and contact us with the contact form.

**Technology :** Tailwind, daisyUi, React, NodeJs, TypeScript, Mangoose, Redux

### Search360 (Summer Camp School which teaches how to present News)

[Live\\_Link](#) | [ClientSide](#) | [ServerSide](#)

- It's a MERN stack-based website which is an online school where anyone can learn how to standardly and moderately present news.
  - It has different authentication systems as admin, Instructor, and User.
  - Which instructor can add a class about News Presentation and each instructor can see what the class added shows on her/his dashboard and would edit his/her classes etc.
- Admin can be controlled full website as doing authorized a user to instructor or admin power and modify instructors classes would be deleted or approved etc.

**Technology** Tailwind, daisyUi, React, NodeJs, Firebase, MongoDB, Vercel
